演讲稿 第 1 至 9 页（开场、第 1 部分、第 2 部分）

> 主讲：第 1 至 6 页定价组 A，第 7 至 9 页定价组 B。按非母语 140 词/分钟写，每页标注词数与时长，合计约 870 词、6 分 15 秒。英文是上台念的版本，中文是背稿用的要点，不上台。规则：全程脱稿，不带提词卡，不看手机。 数字口径：价格 2026-09-12 提取，现货锚点 2026-10-09 当周，供给 2026-10-10。10 月 20 日至 26 日终版刷新后只改数字。

第 1 页 封面（约 80 词，0:35）

EN Good evening, members of the board. We are Group X, and you asked us to put USD 250 million to work in shipping. Our answer in one sentence: skip the peak, buy value, lock income. We buy five secondhand ships, fix three of them on period charters, trade two in the spot market, and keep a small cash reserve. Every price and every rate you will see tonight is a real transaction taken from the Clarksons Shipping Intelligence Network.

要点：董事会口吻开场；一句话结论；五艘船、三锁两现货、少量现金；所有数字来自 Clarksons SIN 的真实成交。

第 2 页 议程（约 75 词，0:30）

EN We will answer three questions in a fixed order: how we allocate the money, why each line is sized the way it is, and which data supports it. The deck follows that order through seven parts. The decision first. Then the prices behind it. Then demand and supply, and the market data that confirms the diagnosis. Then the earnings, the shocks we have planned for, and a short conclusion. Let us start with the decision.

要点：三个固定问题，怎么分、为什么、什么数据；七个部分按这个顺序走；链接语”先看决策”。

第 3 页 分配、理由、数据（约 185 词，1:20）

EN This one table is the whole project. Read it left to right: how much, why, and the data.

Two MR product tankers, 100 million, forty percent. MR is the only segment priced at replacement cost: a five-year-old ship at 0.99 times newbuild in October. Products trade grows 6.3 percent next year, and spot earnings of 53,741 dollars a day sit above the one-year charter, so one ship is fixed and one stays open.

One Aframax, 75 million, thirty percent. The smallest orderbook of any segment, 8.4 percent, 62 ships on order against 223 over twenty years old. A three-year charter at 40,000 a day was fixed on 31 August, so that income is certain through the delivery wave.

Two Kamsarmaxes, 70 million, twenty-eight percent. Dry bulk is in recovery, not at a peak: prices only nine percent above newbuild, and Guinea bauxite exports up 29 percent.

Five million in cash: five months of operating costs and dry powder for the next dip.

Sixty percent of ship-days are fixed. That gives 17.9 percent in the worst case, 19.9 in the base case, 23.7 in the best.

要点：四行各讲”分多少、为什么、数据”；MR 0.99 倍重置成本、成品油 +6.3%、即期 53,741；Aframax 订单簿 8.4%、62 对 223、三年 40,000；Kamsarmax 复苏未过热、溢价 9%、铝土矿 +29%；现金 5 个月 OPEX；合计 70/28/2，锁定 60%，17.9 / 19.9 / 23.7。

第 4 页 资金分配表（约 80 词，0:35）

EN Here is the same money ship by ship. Each row names the transaction behind the price, so the board can check every figure. Two notes. First, the 250 million is treated as equity: no interest, no repayment schedule in a weak year. Banks would lend 60 to 80 percent against five-year-old tonnage if you later want leverage. Second, all five ships are built in Japan or Korea, which keeps them outside the US port-fee regime whose suspension expires around 10 November.

要点：逐船对标成交；融资一句话，全股权，日后可贷 60% 至 80%；全部日韩建造，港口费暂停 11 月 10 日前后到期。

第 5 页 为什么买二手（约 115 词，0:50）

EN The brief allows us to buy or to charter, so we costed three routes. Chartering in locks a cost at the top of the cycle: a chartered-in MR costs 30,000 dollars a day and earns 27,000 in our base case, so only the bull case pays, and there is no asset to sell afterwards. Newbuilding cannot earn inside the window: a ship takes one and a half to three years to build, whichever yard takes the order, so it would arrive after the 2027 to 2028 delivery wave, and at a decade-high price. That leaves secondhand. The chart shows five-year-old prices against newbuild prices. Our segments sit at or just above the line. Suezmax sits far above it, and that is the one segment we refuse.

要点：三条路都算过；租入在山顶锁成本，30,000 对 27,000；新造从签约到交船要 1.5 到 3 年，哪家船厂都一样，窗口内零收入，到手时已在交付潮之后，价格还在十年高位；二手里挑贴近重置成本的，Suezmax 远高于线上所以不买。

第 6 页 四条贸易（约 70 词，0:30）

EN Where do the ships go? The MRs carry clean products from Middle East and Indian refineries to East Africa and South East Asia, where longer hauls are adding tonne-miles. The Aframax is handed to an oil-major-class charterer for three years. One Kamsarmax carries bauxite from Guinea to China, the longest haul in dry bulk, on a twelve-month charter. The other trades the fourth-quarter grain season and then switches to bauxite and coal.

要点：MR 中东与印度炼厂到东非、东南亚；Aframax 整租三年；Kamsarmax 一艘几内亚铝土矿到中国，一艘四季度粮食再转铝土矿与煤。

第 7 页 定价依据一：二手船价（约 85 词，0:40）

EN Part two: where every number comes from. First, purchase prices. Two Aframaxes of the same type and age, Southern Reverence and Pusaka Borneo, both sold at exactly 75 million this spring, so that price is firm. The two Kamsarmaxes follow two Japan-built sales on 10 August: Aquavita Aim at 38 million, Medi Positano at 32 million. The last row is the control. Presinge, a China-built sister, sold a day later at 29.25 million. The 2.75 million gap is the market price of the port-fee insurance we are buying.

要点：两笔同型同龄 Aframax 都是 7,500 万；两艘 Kamsarmax 对标 8 月 10 日两笔日本造成交；对照组 Presinge 2,925 万，275 万价差就是港口费保险的价格。

第 8 页 定价依据二：期租租金（约 90 词，0:40）

EN Second, charter rates. Every rate in our forecast is a fixture from the last two weeks of the data cut. PS Imabari to Suncor, one year at 30,000, is MR number one. Challenge Pollux to ExxonMobil at 27,000 is the proxy for the spot MR. Torm Genesis to AET, three years at 40,000, proves a three-year Aframax charter is signable today. Intensity at 22,000 and XH Hope at 23,000 cover the Kamsarmaxes. And the October assessment for a one-year MR charter is already 43,000, so our fixed leg only has upside.

要点：五笔租约逐一对应五艘船；Torm Genesis 证明三年 Aframax 签得到；10 月 MR 一年期评估 43,000，锁定腿只会更高。

第 9 页 定价依据三：即期运价（约 100 词，0:40）

EN Third, freight rates. Our spot ships trade coal and clean products, and both have fresh fixtures. On 10 September a Kamsarmax was fixed to carry 80,000 tonnes of coal from Australia to India at 25.60 dollars a tonne, about 27,400 dollars a day at September bunker prices, above the 23,000 we assume. An MR took gasoline from the Baltic to the US Gulf at Worldscale 105. The two Suezmax lines are context only: crude at Worldscale 210 and 388 is the war-premium market we stay out of. Three price families, seventeen transactions, all last done. Part three asks whether the fundamentals can hold these prices.

要点：运价是题目点名要的；煤炭 DBCT 到 Vizag 25.60 美元/吨，换算约 27,400/天高于基准 23,000；第二笔煤炭到韩国；MR 波罗的海到美湾 WS105；Suezmax WS210、WS388 只作对照，我们刻意避开；三类价格 17 笔成交全是 last done；链接到第 3 部分供需。

问答时第 1 至 9 页最可能被追问的三句话

1. 为什么只留 500 万现金：去年有组留 1 亿被老师追问；我们留 2%，正好是五个月营运成本，锁定租约每月还回 270 万。
2. 是不是买在高点：分船型答，Suezmax 在高点所以没买；MR 等于重置成本；Kamsarmax 溢价 9%，远低于 2007 年 Panamax 5 年船龄价比新船贵近一倍的那种倒挂。
3. 为什么不租入：租入 MR 一年付 30,000，现货基准只赚 27,000，熊市 22,950；只有牛市 53,741 才赚钱，而且没有船舶增值。
