演讲稿 第 1 至 9 页（开场、第 1 部分、第 2 部分）

> 主讲：第 1 至 6 页定价组 A，第 7 至 9 页定价组 B。按非母语 140 词/分钟写，每页标注词数与时长，合计约 915 词、6 分 30 秒。英文是上台念的版本，中文是背稿用的要点，不上台。规则：全程脱稿，不带提词卡，不看手机。 数字口径：价格 2026-09-12 提取，现货锚点 2026-10-09 当周，供给 2026-10-10。10 月 20 日至 26 日终版刷新后只改数字。

第 1 页 封面（约 85 词，0:35）

EN Good evening, members of the board. We are Group X, and you asked us to put USD 250 million to work in shipping. Our answer in one sentence: skip the peak, buy value, lock income. We buy five secondhand ships, fix three on period charters, trade two spot, and keep a small cash reserve. Our base case earns 19.9 percent before operating costs. Every price and rate comes from the Clarksons Shipping Intelligence Network: real sales and fixtures, plus its assessment for the MR price.

要点：董事会口吻开场；一句话结论；五艘船、三锁两现货、少量现金；基准 19.9%（扣 OPEX 前）；价格与租金来自 Clarksons SIN 的真实成交，MR 买价用 SIN 5 年船龄评估（近期没有披露价格的 5 年船龄 MR 成交）。

第 2 页 议程（约 78 词，0:35）

EN We will answer three questions in a fixed order: how we allocate the money, why each line is sized the way it is, and which data supports it. The deck follows the brief, item by item, in seven parts. The decision first. Then the prices behind it. Then demand and supply, and the market data that confirms the diagnosis. Then the earnings, the shocks we have planned for, and a short conclusion. Let us start with the decision.

要点：三个固定问题，怎么分、为什么、什么数据；七个部分按题目顺序走：第 1 部分答题目 1 和 2，第 2 部分答 3，第 3、4 部分答 4，第 5 部分答 5，第 6 部分答 6；链接语”先看决策”。

第 3 页 分配、理由、数据（约 191 词，1:20）

EN One table, read left to right: how much, why, and the data.

Two MR product tankers, 100 million, forty percent. MR trades at replacement cost: 0.99 times newbuild in October. Products trade grows 6.3 percent next year. One ship is fixed for a year. The other stays open: spot is above the one-year rate, but that rate already prices the expected fall, so staying open costs little and keeps the upside. It fixes if spot stays below 20,000 for eight weeks.

One Aframax, 75 million, thirty percent. The smallest orderbook of our five segments, 8.4 percent, 62 ships on order against 223 over twenty years old. A benchmark three-year charter at 40,000 on 31 August lets us lock that income through the delivery wave.

Two Kamsarmaxes, 70 million, twenty-eight percent. Dry bulk is strong but off its September high: prices only nine percent above newbuild, and Guinea bauxite exports up 29 percent.

Five million in cash: nearly five months of operating costs.

Three fixed ships is the fewest that stays above 15 percent before operating costs in our stress test back to 2010. Our scenarios give 17.9, 19.9 and 23.7 percent.

要点：四行各讲”分多少、为什么、数据”；MR 0.99 倍重置成本、成品油 +6.3%；一艘锁一年，一艘留现货：一年期已计入预期回落，留着成本小、保留上行，现货连续 8 周低于 20,000 即锁；Aframax 订单簿五个船型最低 8.4%、62 对 223、三年 40,000（对标 Torm Genesis）；Kamsarmax 强势但离开 9 月高点、溢价 9%、铝土矿 +29%；现金接近五个月 OPEX；合计 70/28/2，锁三艘是 2010 年以来压力测试守住 15% 的最少船数；情景 17.9 / 19.9 / 23.7。

第 4 页 资金分配表（约 83 词，0:35）

EN Here is the same money ship by ship. Each row names the sale or assessment behind the price, so the board can check every figure. Two notes. First, the 250 million is treated as equity: no interest, no repayment schedule in a weak year. Banks would lend 60 to 80 percent against five-year-old tonnage if you later want leverage. Second, all five ships are built in Japan or Korea, which keeps them outside the US port-fee regime whose suspension expires around 10 November.

要点：逐船对标成交，MR 对标 SIN 评估；融资一句话，全股权，日后可贷 60% 至 80%；全部日韩建造，港口费暂停 11 月 10 日前后到期。

第 5 页 为什么买二手（约 110 词，0:45）

EN The brief allows us to buy or to charter, so we costed three routes for both segments. Chartering in keeps only the spread over hire. A chartered-in Kamsarmax costs 22,000 a day and earns 23,000 in our base case: 350,000 dollars a year, or a 3.2 million loss at 2025 earnings. A chartered-in MR costs 30,000 and earns 27,000. It also leaves most of the 250 million idle, and we own nothing at the end. Newbuilding takes one and a half to three years, so it earns nothing in our window. That leaves secondhand. The chart shows our segments at or just above replacement cost, and Suezmax far above it.

要点：三条路都算过；两类船都算过租入：Kamsarmax 租 22,000 赚 23,000，基准一年多 35 万（牛市 49 万）、按 2025 年均值亏 319 万；MR 租 30,000 赚 27,000；租入几乎不用资本、2.5 亿闲置、到期没有资产；新造从签约到交船要 1.5 到 3 年，窗口内零收入，还要付进度款；二手里挑贴近重置成本的，Suezmax 远高于线上所以不买。

第 6 页 四条贸易（约 71 词，0:30）

EN Where do the ships go? The MRs carry clean products from Indian and Middle East refineries to Africa and Asia, and on Atlantic voyages. The Aframax is fixed for three years at the AET benchmark rate. One Kamsarmax goes on a twelve-month charter in Guinea bauxite or Pacific coal. The other trades the fourth-quarter grain season and then switches to bauxite and coal. [Name] now shows where every price comes from.

要点：MR 印度与中东炼厂到非洲、亚洲，另跑大西洋航次；Aframax 按 AET 对标租金整租三年；Kamsarmax #1 一年期租，几内亚铝土矿或太平洋煤炭由租家安排；Kamsarmax #2 四季度粮食再转铝土矿与煤；交给定价组 B（[Name] 处填定价组 B 主讲人的名字）。

第 7 页 定价依据一：二手船价（约 94 词，0:40）

EN Part two: where every number comes from. First, purchase prices. Two Aframaxes of the same type and age, Southern Reverence and Pusaka Borneo, both sold at about 75 million this spring, so that price is firm. The two

Kamsarmaxes follow two Japan-built sales on 10 August: Aquavita Aim at 38 million, Medi Positano at 32 million. Presinge, a China-built sister, sold a day later at 29.25 million; that gap includes the port-fee risk we avoid. For the MRs, no recent five-year-old sale had a published price, so we use the Clarksons assessment, 50 million.

要点：两笔同型同龄 Aframax 均约 7,500 万；两艘 Kamsarmax 对标 8 月 10 日两笔日本造成交；中国造姐妹船 Presinge 2,925 万，275 万价差包含港口费风险（Medi Positano 还有脱硫塔）；MR 用 SIN 5 年船龄评估 5,000 万，近期没有披露价格的 5 年船龄 MR 成交。

第 8 页 定价依据二：期租租金（约 98 词，0:40）

EN Second, charter rates. Every base-case rate is a fixture from the four weeks before the data cut. PS Imabari to Suncor, one year at 30,000, prices MR number one. Challenge Pollux to ExxonMobil at 27,000 is the proxy for the spot MR. Torm Genesis to AET, three years at 40,000 on 31 August, for a ship built in 2011; ours is seven years younger. Intensity at 22,000 and XH Hope at 23,000 cover the Kamsarmaxes. The October assessment for a one-year MR charter is already 43,000; we keep the last-done 30,000, so our MR base case is conservative.

要点：五笔对标租约逐一对应五艘船，都是数据截止前四周内的 last done；Torm Genesis 是 2011 年船，三年 40,000，我们的船年轻 7 岁；10 月 MR 一年期评估 43,000，基准仍按最近成交 30,000，MR 基准偏保守。

第 9 页 定价依据三：即期运价（约 105 词，0:45）

EN Third, freight rates. Our spot ships carry grain, coal and clean products; coal and products have fresh fixtures. On 10 September a Kamsarmax was fixed to carry 80,000 tonnes of coal from Australia to India at 25.60 dollars a tonne, about 27,400 dollars a day, above the 23,000 we assume. An MR took gasoline from the Baltic to the US Gulf at Worldscale 105. The two Suezmax lines are context only: crude at Worldscale 210 and 388 is the war-premium market we stay out of. Three price families: sixteen last-done transactions and one Clarksons assessment. Part three asks whether the fundamentals can hold these prices.

要点：运价是题目点名要的；煤炭 DBCT 到 Vizag 25.60 美元/吨，换算约 27,400/天高于基准 23,000；第二笔煤炭到韩国；MR 波罗的海到美湾 WS105；Suezmax WS210、WS388 只作对照，我们刻意避开；三类价格：16 笔 last done 成交加 1 个 SIN 评估（MR 买价）；链接到第 3 部分供需。

问答时第 1 至 9 页最可能被追问的三句话

1. 为什么只留 500 万现金：去年有组留 1 亿被老师追问；我们留 2%，接近五个月营运成本，锁定租约每月还回 270 万。
2. 是不是买在高点：分船型答，Suezmax 在高点所以没买；MR 等于重置成本；Kamsarmax 溢价 9%，远低于 2007 年 Panamax 5 年船龄价比新船贵近一倍的那种倒挂。
3. 为什么不租入：两类船都算过。Kamsarmax 租 22,000 赚 23,000，最好一年多 35 万，按 2025 年均值亏 319 万；MR 租 30,000 赚 27,000。租入只赚差价、几乎不用资本、到期没有船。若被追问”10 月 MR 现货 53,741，按 43,000 租入不是赚吗”：好行情一年多约 376 万，坏行情亏约 700 万，风险仍不对称，而且 2.5 亿照样闲置。
